January 2008

This research was funded by a grant from the National Institute of Child Health and Human Development under grant R01 HD40428-02 to the Population Research Center, University of Texas at Austin; Chandra Muller (PI) and the National Science Foundation grant number REC-0126167, Chandra Muller (PI). Persons interested in obtaining data files from Add Health should contact Add Health, Carolina Population Center, 123 W. Franklin Street, Chapel Hill, NC 27516-2524 (addhealth@unc.edu).

WAVE III EDUCATION DATA CONTEXTUAL COMPONENT, 1990 CENSUS DATA

I. INTRODUCTION

A. Component Description

A central goal pursued during efforts to construct contextual variables based on 1990 census measures was to produce indicators closely mirroring those included in Add Health's comprehensive contextual database, thus enhancing the compatibility between the Add Health and AHAA data sets. We also focused on developing indicators that captured equivalent contextual information about schools Add Health/AHAA students transferred into during their high school careers – information not available in Add Health's contextual data sets (Add Health's contextual data is restricted to the original Add Health schools students were enrolled in during Wave I).

We generated variables from the 1990 census which approximate those developed for the following subdivisions of Add Health's contextual database: Education, Household, Labor, Population, and Poverty. All AHAA contextual variables are district-level measures. Add Health contextual variables, in contrast, reflect county, tract, and block-level information. It is also important to note that in most cases we converted numeric census measures into proportions to avoid problems with deductive disclosure. Please note that the summation of some proportion sets fail to equal 1 due to rounding.

B. Attaching Census Data to AHAA/Add Health Schools

Attaching 1990 census measures to the school districts in the AHAA study required reconciling 1990 school district boundaries to 1990 census geography (i.e., blocks and block groups). This was accomplished by using Proximity's (www.proximityone.com) 1990 census block to 1990 school district equivalency file which assigns each block in the 1990 census to the school district(s) they overlap. In the rare case that a block spanned the boundaries of two or more school districts, the census data of that block was assigned to each of the school districts proportional to the area of the block that fell within its perimeters. Deriving the more comprehensive block-group level data involved aggregating block level population data to the block-group level, and calculating the percentage of the population for each block group that fell within the bounds of each school district. This produced a 1990 block-group to 1990 school district equivalency file that we then used to attach block-group level data. Again, census data were allocated to school districts in proportion to the percent of the population (rather than area) of each block group that fell within each school district.

C. Organization of 1990 Census Indicators

The next sections detail the district-level indicators developed from the 1990 census data. Specifically, AHAA 1990 census indicators are organized according to the

particular Add Health contextual data set (Education, Household, Labor, Population, and Poverty) to which they correspond. For example, all indicators related to education are included under the heading Education-Related Indicators. Within each of these major headings, variables are further ordered according to more detailed sub-topics. Returning to the education example, all education-related indicators are grouped into four sub-topics: school type, educational attainment, civilian educational status, and educational enrollment by race. Importantly, within each sub-topic, general information is briefly presented to assist analysts in understanding how to use the indicators.

D. Data File

1990 Census measures and constructed variables are in the data file called educx90.

II. DATA

A. Education-Related Indicators

As mentioned above, the education-related indicators are arranged into four sub-topics: school type, educational attainment, civilian educational status, and educational enrollment by race. A detailed description of each education-related indicator is presented, including discussion of its analytical significance and use.

These measures capture proportionate information about the population in the district and its attendance patterns according to 1990 census records.

ECTPSR3

This indicator provides information about the proportion of students aged 3 years and over in pre-primary school living in each school district and enrolled in private school. (The proportion of students aged 3 years and over in pre-primary school that is enrolled in public school can be calculated by subtracting the value of this variable from 1).

ECTEHSP3

This measure indicates the proportion of students aged 3 years and over in elementary or high school living in each school district and enrolled in private school. (The proportion of students aged 3 years and over in elementary or high school that is enrolled in public school can be calculated by subtracting the value of this variable from 1).

1. Educational Attainment

These measures capture information about the educational levels of those aged 25 and over living in each Add Health/AHAA school district. Specifically, these indicators

provide information about the proportion of the population aged 25+ living in each school district that earned high school diplomas/equivalent degree, and bachelor degrees or higher.

ECANHS25

This measure indicates the proportion of those aged 25 and over living in each school district with no high school diploma or equivalent.

ECACOM25

This indicator measures the proportion of those aged 25 and over living in each school district with a college degree or more (including those with any type of postgraduate degree or training).

2. Civilian Educational Status

These measures provide proportional information about the educational status of the civilian population living in each Add Health/AHAA school district.

ECCPINHS

This measure provides information about the proportion of the civilian population aged 16-19 living in each Add Health/AHAA school's particular school district that is enrolled in school.

ECCNSAFG

This indicator captures information about the proportion of the civilian population aged 16-19 living in each Add Health/AHAA school district that did not graduate from high school, is not enrolled in school, and is not in the armed forces.

ECCNSAFL

This indicator provides information about the proportion of the civilian population aged 16-19 living in each Add Health/AHAA school district that did not graduate from high school, is not enrolled in school, not in the armed forces, and not in the labor force.

3. Educational Enrollment by Race

ECERWHITE

This indicator captures information about the proportion White of students living in each school district enrolled in private and public pre-primary, elementary, middle, or high school.

ECERBLAK

This indicator measures information about the proportion Black of students living in each school district enrolled in private and public pre-primary, elementary, middle, or high school.

ECERASPI

This variable provides information about the proportion Asian or Pacific Islander of students living in each school district enrolled in private and public pre-primary, elementary, middle, or high school.

ECEROTHR

This indicator captures information about the proportion Other (includes American Indian and other minority groups) of students living in each school district enrolled in private and public pre-primary, elementary, middle, or high school.

ECERHISP

This variable measures information about the proportion Hispanic of students living in each school district enrolled in private and public pre-primary, elementary, middle, or high school.

B. Household Indicators

The household indicators are organized under one heading entitled household indicators – general and family-type.

1. Household Indicators – General and Family-Type

These measures inform the analyst of the absolute number of households located within Add Health/AHAA school districts. They also capture pertinent information about the proportion of family households within each Add Health/AHAA school district that is married-couple household with own children under 18, and female householder, no husband present, households with own children under 18.

ECHNHLDS

This indicator provides information about the absolute number of households (in thousands) in each AHAA school district.

ECHFMCWK

This indicator captures information about the proportion of family households in each school district that is married-couple family household with own children under the age of 18.

ECHFSFWK

This indicator provides information about the proportion of family households situated in each AHAA school district that is female householder, no husband present, households with own children under the age of 18.

C. Labor Force Indicators

The labor force indicators are divided into four sub-topics: labor force characteristics, unemployment patterns, employment patterns – mothers, and occupation-specific measures.

1. Labor Force Characteristics

ECLPLFF

This indicator provides information about the proportion female of the civilian labor force living in each AHAA school district. (Analysts can calculate the proportion male of the civilian labor force by subtracting value for this variable from 1).

ECLPLF16

This measure captures information about the proportion of females (not in the armed forces) aged 16 years and over living in each school district that is in the civilian labor force. (Analysts can calculate the proportion of females not in the armed forces that is not in the civilian labor force by subtracting the value from 1).

ECLCLM16

This indicator provides information about the proportion of males (not in armed forces) aged 16 years and over living in each school district that is in the civilian labor force.

ECLPFW89

This indicator captures information about the proportion of females aged 16 and over living in each school district who ever worked in 1989.

ECLPMW89

This indicator captures information about the proportion of males aged 16 and over living in each school district who ever worked in 1989.

ECLPIARF

This variable provides information about the proportion of individuals aged 16 and over living in each school district that is in the labor force and in the armed forces.

ECLPMARF

This indicator captures information about the proportion of males aged 16 and over living in each Add Health/AHAA school district that is in the labor force and in the armed forces.

ECLPFARF

This indicator captures information about the proportion of females aged 16 and over living in each Add Health/AHAA school district that is in the labor force and in the armed forces.

2. Unemployment Patterns

These measures capture information about gender-specific unemployment rates in school district in which Add Health/AHAA schools are located.

ECLUEM16

This indicator measures the proportion unemployed of males aged 16 and over living in each AHAA/Add Health district.

ECLUEF16

This indicator measures the proportion unemployed of females aged 16 and over living in each AHAA/Add Health district.

3. Employment Patterns – Mothers

These indicators provide information about the proportion of women aged 16 and over with children of each ages in the labor force and living in the school districts in which Add Health/AHAA schools are located.

ECLPWFU6

This variable measures the proportion of females aged 16 years and over living in each Add Health/AHAA school district in the labor force with own children under 6 years old.

ECLWF617

This variable measures the proportion of females aged 16 years and over living in each Add Health/AHAA school district in the labor force with own children between the ages of 6 and 17 only.

ECLWFU18

This indicator provides information about the proportion of females aged 16 years and over living in each AHAA/Add Health school district in the labor force with own children under the age of 18.

4. Occupation-Specific Measures

These measures indicate the proportion of individuals living in each Add Health/AHAA school district employed in various jobs. They can all be interpreted in the following manner: Schools located in districts where the proportion of individuals employed in X industry/occupation is Y (proportion listed here) were assigned the value Y for this variable. The census classifies jobs in two ways, as within industries (referring to the product of the employing organization) and as within occupations (referring to the employee's job activities). For example, a janitor at a bus station would be classified as working in a service occupation within the transportation industry. We retained this organizational structure when constructing occupation-specific measures.

ECOAGMN

This indicator provides information about the proportion of individuals living in each school district that is employed in agriculture, forestry, fisheries, and mining occupations.

ECOCONST

This indicator provides information about the proportion of persons living in each Add Health/AHAA school district employed in construction.

ECOMANUF

This indicator captures information about the proportion of individuals living in each Add Health/AHAA school district employed in manufacturing.

ECOTRCUT

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in transportation, communications, or utilities.

ECOWSTD

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in wholesale trade.

ECORTTD

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in retail trade.

ECOFREIN

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in finance, real estate, or insurance.

ECOBSNRS

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in business and repair services.

ECOPERS

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in personal, entertainment, and recreational services.

ECOPROFS

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in professional and related services. This includes those employed in the field of health services, educational services, and other professional and related services.

ECOPUBAD

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in public administration.

ECOEXMAN

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in personal, entertainment, and recreational services. This includes those employed in executive, administrative, managerial, and professional specialty occupations.

ECOTECHS

This variable indicates the proportion of individuals living in each Add Health/AHAA school district employed in technical, sales, and administrative support occupations.

ECOSERVI

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in service occupations.

ECOFAFOF

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in farming, forestry, and fishing.

ECOPRCRP

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed in precision production, craft, and repair occupations.

ECOOPFAL

This variable captures information about the proportion of individuals living in each Add Health/AHAA school district employed as operators, fabricators, and laborers.

D. Population-Related Indicators

The population-related indicators are arranged into two sub-topics: racial composition variables and age-structure variables.

ECPEOPLE

This variable equals the number of people in the school district.

1. Racial Composition Variables

These measures capture information about the racial composition of the AHAA/Add Health school district at the time of the 1990 Census.

ECRCWHITE

This indicator provides information about the proportion White of the population living in each school district.

ECRCBLAK

This indicator provides information about the proportion Black of the population living in each school district.

ECRCASPI

This indicator provides information about the proportion Asian or Pacific Islander of the population living in each school district.

ECRCOTHR

This indicator provides information about the proportion Other (includes Native American) of the population living in each school district.

ECRCHISP

This indicator provides information about the proportion Hispanic of the population living in each school district.

2. Age-Structure Variables

These variables provide information about the population structure of the school districts. Importantly, these are general measures reflecting the *proportion* of all individuals in the school district that are in the delineated age intervals. We calculated proportionate values rather than presenting actual numbers for these age-structure measures to avoid potential problems with deductive disclosure. Because of AHAA/Add Health's focus on adolescence and young adulthood, the age structure variables were designed to capture information about the proportion of individuals in single-year intervals from age 14 to 21. During the early years of childhood (i.e., 1-4, 5-9, 10-11, 12-13), variables were constructed for broader 2- to 5-year age categories. Likewise for mature adulthood, the age structure variables capture information about aggregated 5- to 10-year age intervals (i.e., 22-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-59, 60-69, and 70+).

ECPU1

Proportion less than 1 year old of the population in each school district.

ECP0104

Proportion 1-4 years old of the population in each school district.

ECP0509

Proportion 5-9 years old of the population in each school district.

ECP1011

Proportion 10-11 years old of the population in each school district.

ECP1213

Proportion 12-13 years old of the population living in each school district.

ECP14

Proportion 14 years old of the population living in each school district.

ECP15

Proportion 15 years old of the population living in each school district.

ECP16

Proportion 16 years old of the population living in each school district.

ECP17

Proportion 17 years old of the population living in each school district.

ECP18

Proportion 18 years old of the population living in each school district.

ECP19

Proportion 19 years old of the population living in each school district.

ECP20

Proportion 20 years old of the population living in each school district.

ECP21

Proportion 21 years old of the population living in each school district.

ECP2224

Proportion 22-24 years old of the population living in each school district.

ECP2529

Proportion 25-29 years old of the population living in each school district.

ECP3034

Proportion 30-34 years old of the population living in each school district.

ECP3539

Proportion 35-39 years old of the population living in each school district.

ECP4044

Proportion 40-44 years old of the population living in each school district.

ECP4549

Proportion 45-49 years old of the population living in each school district.

ECP5059

Proportion 50 to 59 years old of the population living in each school district.

ECP6069

Proportion 60 to 69 years old of the population living in each school district.

ECP70P

Proportion 70 years and older of the population living in each school district.

E. Poverty-Related Indicators

The poverty-related variables were organized into the following three sub-topics: race-specific general poverty measures, age-specific general poverty measures, and age-race-specific poverty measures.

1. Race-Specific General Poverty Measures

These measures provide information about the proportion of different racial groups living in each Add Health/AHAA school district reporting 1989 income below poverty level.

ECRPVWHI

This variable measures the proportion White of persons living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVBLK

This variable measures the proportion Black of persons living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVASP

This variable measures the proportion Asian or Pacific Islander of persons living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVOTH

This variable measures the proportion of Other people (including Native Americans) living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVHSP

This variable measures the proportion Hispanic of persons living in each Add Health/AHAA school district with 1989 income below poverty level.

2. Age-Specific General Poverty Measures

These measures capture information about the proportion of individuals in several age categories living in each AHAA/Add Health school district with 1989 income below poverty level.

ECAPVU18

This indicator captures information about the proportion of persons under 18 living in each AHAA/Add Health school district with 1989 income below poverty level.

ECAP1864

This indicator captures information about the proportion of persons ages 18 to 64 living in each Add Health/AHAA school district with 1989 income below poverty level.

ECAPV65P

This indicator provides information about the proportion of persons aged 65 and over living in each AHAA/Add Health school district with 1989 income below poverty level.

3. Age-Race-Specific Poverty Measures

These measures provide information about the proportion of individuals of given ages.

i. Under 18 Race-Specific Indicators

ECRPVW18

This indicator captures information about the proportion White of persons under the age of 18 living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVB18

This indicator captures information about the proportion Black of persons under the age of 18 living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVA18

This indicator captures information about the proportion Asian and Pacific Islander of persons under the age of 18 living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVO18

This indicator captures information about the proportion Other of persons under the age of 18 living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRPVH18

This indicator captures information about the proportion Hispanic of persons under the age of 18 living in each Add Health/AHAA school district with 1989 income below poverty level.

ii. Age 18-64 Race-Specific Poverty Measures

ECRW1864

This variable measures the proportion White of persons 18-64 years old living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRB1864

This variable measures the proportion Black of persons 18-64 years old living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRA1864

This variable measures the proportion Asian and Pacific Islander of persons 18-64 years old living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRO1864

This variable measures the proportion Other of persons 18-64 years old living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRH1864

This variable measures the proportion Hispanic of persons 18-64 years old living in each Add Health/AHAA school district with 1989 income below poverty level.

c. Age 65 and Over Race-Specific Poverty Measures**ECRW65P**

This indicator captures information about the proportion White of persons age 65 and over living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRB65P

This indicator captures information about the proportion Black of persons age 65 and over living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRA65P

This indicator captures information about the proportion Asian and Pacific Islander of persons age 65 and over living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRH65P

This indicator captures information about the proportion Hispanic of persons age 65 and over living in each Add Health/AHAA school district with 1989 income below poverty level.

ECRO65P

This indicator captures information about the proportion Other of persons age 65 and over living in each Add Health/AHAA school district with 1989 income below poverty level.

4. Family Income Measures

These measures were taken from the National Center for Education Statistics (NCES) data file for 1990. Some AHAA schools could not be matched to the NCES data file, in which case the variable is missing (.).

ECINC1

The percentage of families in the district earning less than \$5,000 in 1989.

ECINC2

The percentage of families in the district earning \$5,000-9,999 in 1989.

ECINC3

The percentage of families in the district earning \$10,000-12,499 in 1989.

ECINC4

The percentage of families in the district earning \$12,500-14,999 in 1989.

ECINC5

The percentage of families in the district earning \$15,000-17,499 in 1989.

ECINC6

The percentage of families in the district earning \$17,500-19,999 in 1989.

ECINC7

The percentage of families in the district earning \$20,000-22,499 in 1989.

ECINC8

The percentage of families in the district earning \$22,500-24,999 in 1989.

ECINC9

The percentage of families in the district earning \$25,000-27,499 in 1989.

ECINC10

The percentage of families in the district earning \$27,500-29,999 in 1989.

ECINC11

The percentage of families in the district earning \$30,000-32,499 in 1989.

ECINC12

The percentage of families in the district earning \$32,500-34,999 in 1989.

ECINC13

The percentage of families in the district earning \$35,000-37,499 in 1989.

ECINC14

The percentage of families in the district earning \$37,500-39,999 in 1989.

ECINC15

The percentage of families in the district earning \$40,000-42,499 in 1989.

ECINC16

The percentage of families in the district earning \$42,500-44,999 in 1989.

ECINC17

The percentage of families in the district earning \$45,000-47,499 in 1989.

ECINC18

The percentage of families in the district earning \$47,500-49,999 in 1989.

ECINC19

The percentage of families in the district earning \$50,000-54,999 in 1989.

ECINC20

The percentage of families in the district earning \$55,000-59,999 in 1989.

ECINC21

The percentage of families in the district earning \$60,000-74,999 in 1989.

ECINC22

The percentage of families in the district earning \$75,000-99,999 in 1989.

ECINC23

The percentage of families in the district earning \$100,000-124,999 in 1989.

ECINC24

The percentage of families in the district earning \$125,000-149,999 in 1989.

ECINC25

The percentage of families in the district earning \$150,000 or more in 1989.

III. NAMING CONVENTIONS

A. Variable Names and Labels

Contextual variables are named according to a standard format:

1. Each variable consists of up to but not exceeding 8 upper-case characters.
2. The initial character of all variables is **E**, serving as a reference to the educational component of Add Health, AHAA.
3. The second character of all variables, the letter **C**, stands for ‘context’ and associates each of these variables with the Contextual Component of the broader Add Health/AHAA data set.
4. The next six characters within Contextual variable names describe more specifically what each variable measures.
5. While the variable names consist of eight or fewer characters, the variable labels assigned to each variable can contain up to 40 characters including spaces.

B. Data File Names

The first three characters of all Contextual component data files are edu, serving as a reference to the educational component of Add Health, AHAA.

IV. MISSING CODES

9993 and *99999993*: Item is missing for a school on the source data file, e.g., information about a particular survey question is not available for a given school, but information for other items on the survey is available for the school.
